Amara has many plants on her farm.

Today, Amara must find her pumpkins for her autumn potluck. What do we know about pumpkins?

A pumpkin...

is large and round,
often orange,
and has a thick shell.

It grows on vines
and has a hard stem at the top.
And its mostly hollow center has...

orange pulp,
squishy innards,
and many seeds.

Let's help Amara find her pumpkins!

A pumpkin is large and round.
Is that a pumpkin?

No. That's an apple. An apple is round,
but not large like a pumpkin.
